

**Solve each problem.****Answers**

- 1) Using 66 boxes of nails a carpenter was able to finish 594 bird houses. Write an equation that can be used to express the relationship between the total number of birdhouses completed(t) and the boxes of nails(b) used.
- 2) A chef bought 47 bags of oranges at the supermarket and it cost her \$63.92. Write an equation that can be used to express the relationship between the total cost(t) and the number of bags of oranges(b) purchased.
- 3) It cost \$1,891.25 for 85 pounds of beef jerky. Write an equation that can be used to express the relationship between the total cost(t) and the pounds of beef jerky(p) purchased.
- 4) A school had to buy 63 new science books and it ended up costing \$2,982.42 total. Write an equation that can be used to express the relationship between the total cost(t) and the number of books(b) purchased.
- 5) A company used 49 lemons to make 7 bottles of lemonade. Write an equation that can be used to express the relationship between the total number of lemons needed (t) for each bottle of lemonade (b).
- 6) You can buy 13 pieces of chicken for \$37.44. Write an equation that can be used to express the relationship between the total price(t) and the pieces of chicken(c) you buy.
- 7) The combined weight of 12 concrete blocks is 74.88 kilograms. Write an equation that can be used to express the relationship between the total weight(t) and the number of concrete blocks(b) you have.
- 8) GVAR traveled 24.18 kilometers in 13 minutes. Write an equation that can be used to express the relationship between the total kilometers traveled(t) and the minutes(m) it took.
- 9) A phone store earned \$180.16 after they sold 32 phone cases. Write an equation that can be used to express the relationship between the total money earned (t) and the number of cases(c) sold.
- 10) At a carnival it costs \$97.24 for 68 tickets. Write an equation that can be used to express the relationship between the total cost (t) and the number of tickets(n) you buy.

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____

8. _____

9. _____

10. _____

Answers

1. $t = b9$
2. $t = b1.36$
3. $t = p22.25$
4. $t = b47.34$
5. $t = b7$
6. $t = c2.88$
7. $t = b6.24$
8. $t = m1.86$
9. $t = c5.63$
10. $t = n1.43$
