

Solve each problem.

1) $\frac{2}{4} - \frac{1}{7} =$

2) $\frac{3}{9} + \frac{1}{5} =$

3) $\frac{2}{3} - \frac{3}{6} =$

4) $\frac{5}{6} + \frac{3}{4} =$

5) $\frac{2}{4} - \frac{1}{3} =$

6) $\frac{1}{2} + \frac{3}{6} =$

7) $\frac{8}{9} - \frac{5}{10} =$

8) $\frac{1}{5} + \frac{1}{8} =$

9) $\frac{5}{7} - \frac{1}{3} =$

10) $\frac{1}{3} + \frac{1}{5} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{2}{4} - \frac{1}{7} = \frac{14}{28} - \frac{4}{28} = \frac{10}{28}$

2) $\frac{3}{9} + \frac{1}{5} = \frac{15}{45} + \frac{9}{45} = \frac{24}{45}$

3) $\frac{2}{3} - \frac{3}{6} = \frac{4}{6} - \frac{3}{6} = \frac{1}{6}$

4) $\frac{5}{6} + \frac{3}{4} = \frac{10}{12} + \frac{9}{12} = 1\frac{7}{12}$

5) $\frac{2}{4} - \frac{1}{3} = \frac{6}{12} - \frac{4}{12} = \frac{2}{12}$

6) $\frac{1}{2} + \frac{3}{6} = \frac{3}{6} + \frac{3}{6} = 1\frac{0}{6}$

7) $\frac{8}{9} - \frac{5}{10} = \frac{80}{90} - \frac{45}{90} = \frac{35}{90}$

8) $\frac{1}{5} + \frac{1}{8} = \frac{8}{40} + \frac{5}{40} = \frac{13}{40}$

9) $\frac{5}{7} - \frac{1}{3} = \frac{15}{21} - \frac{7}{21} = \frac{8}{21}$

10) $\frac{1}{3} + \frac{1}{5} = \frac{5}{15} + \frac{3}{15} = \frac{8}{15}$

Answers

1. $\frac{10}{28}$
2. $\frac{24}{45}$
3. $\frac{1}{6}$
4. $1\frac{7}{12}$
5. $\frac{2}{12}$
6. $1\frac{0}{6}$
7. $\frac{35}{90}$
8. $\frac{13}{40}$
9. $\frac{8}{21}$
10. $\frac{8}{15}$
