

Solve each problem.

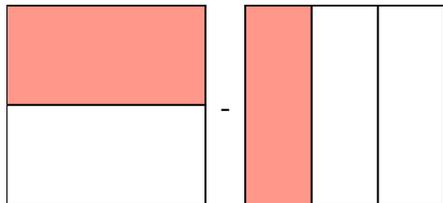

1) $\frac{4}{7} - \frac{1}{3} =$

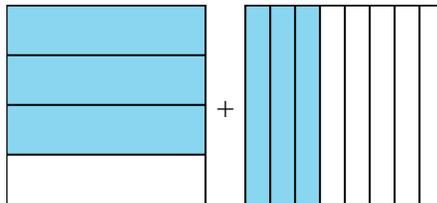

2) $\frac{7}{9} + \frac{3}{4} =$

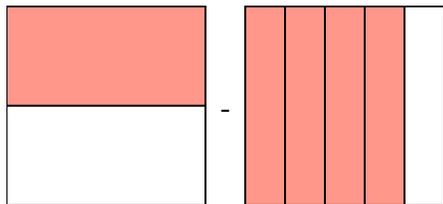

3) $\frac{1}{2} - \frac{1}{3} =$

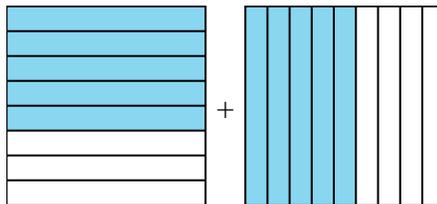

4) $\frac{3}{4} + \frac{3}{8} =$

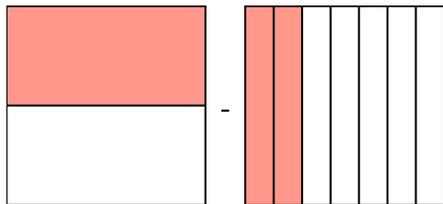

5) $\frac{4}{5} - \frac{1}{2} =$

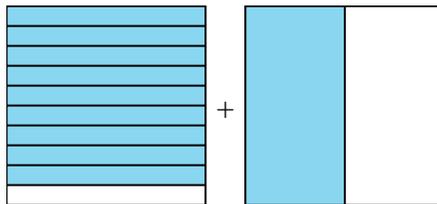

6) $\frac{5}{8} + \frac{5}{9} =$

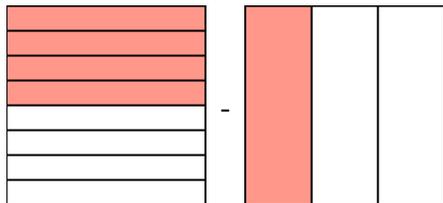

7) $\frac{1}{2} - \frac{2}{7} =$

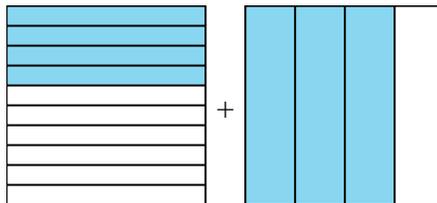

8) $\frac{9}{10} + \frac{1}{2} =$

9) $\frac{4}{8} - \frac{1}{3} =$

10) $\frac{3}{4} + \frac{4}{10} =$

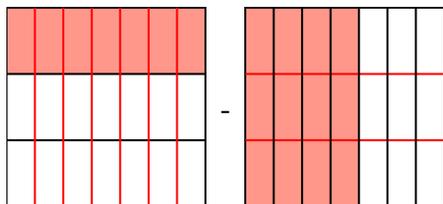

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

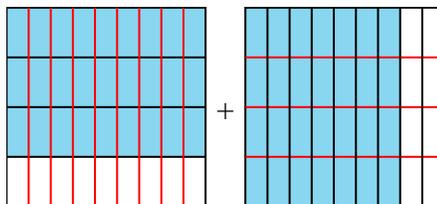

Solve each problem.

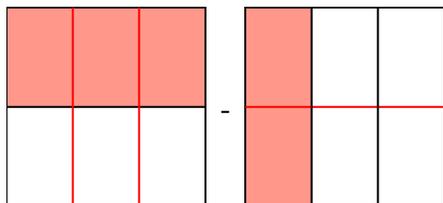

1) $\frac{4}{7} - \frac{1}{3} = \frac{12}{21} - \frac{7}{21} = \frac{5}{21}$

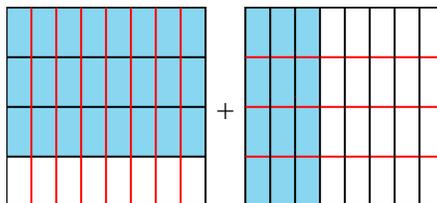

2) $\frac{7}{9} + \frac{3}{4} = \frac{28}{36} + \frac{27}{36} = 1\frac{19}{36}$

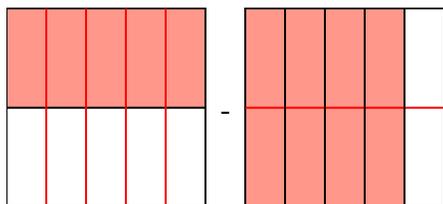

3) $\frac{1}{2} - \frac{1}{3} = \frac{3}{6} - \frac{2}{6} = \frac{1}{6}$

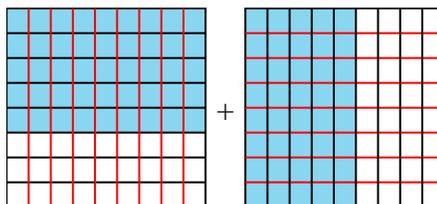

4) $\frac{3}{4} + \frac{3}{8} = \frac{6}{8} + \frac{3}{8} = 1\frac{1}{8}$

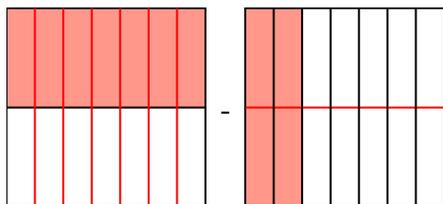

5) $\frac{4}{5} - \frac{1}{2} = \frac{8}{10} - \frac{5}{10} = \frac{3}{10}$

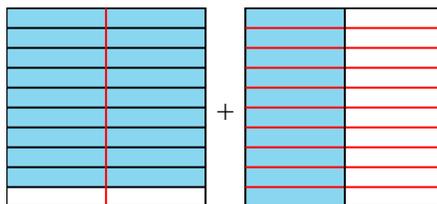

6) $\frac{5}{8} + \frac{5}{9} = \frac{45}{72} + \frac{40}{72} = 1\frac{13}{72}$

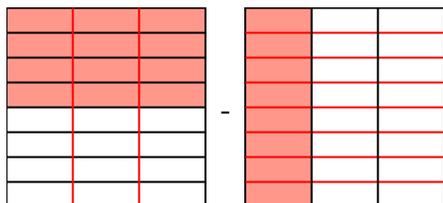

7) $\frac{1}{2} - \frac{2}{7} = \frac{7}{14} - \frac{4}{14} = \frac{3}{14}$

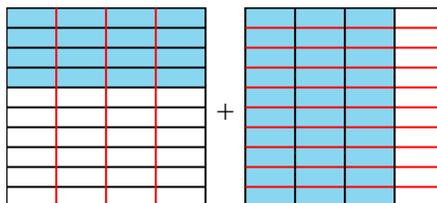

8) $\frac{9}{10} + \frac{1}{2} = \frac{9}{10} + \frac{5}{10} = 1\frac{4}{10}$

9) $\frac{4}{8} - \frac{1}{3} = \frac{12}{24} - \frac{8}{24} = \frac{4}{24}$

10) $\frac{3}{4} + \frac{4}{10} = \frac{15}{20} + \frac{8}{20} = 1\frac{3}{20}$

Answers

1. $\frac{5}{21}$

2. $1\frac{19}{36}$

3. $\frac{1}{6}$

4. $1\frac{1}{8}$

5. $\frac{3}{10}$

6. $1\frac{13}{72}$

7. $\frac{3}{14}$

8. $1\frac{4}{10}$

9. $\frac{4}{24}$

10. $1\frac{3}{20}$
