

Solve each problem. Write your answer as an improper fraction. Write the answer as a mixed number fraction (if possible).

1) $\frac{14}{6} - \frac{9}{6} =$

2) $2\frac{3}{4} + \frac{10}{4} =$

3) $\frac{1}{6} - \frac{5}{6} =$

4) $2\frac{5}{6} + \frac{11}{6} =$

5) $\frac{21}{12} - 1\frac{5}{12} =$

6) $\frac{12}{5} + 2\frac{1}{5} =$

7) $3\frac{1}{2} - 1\frac{1}{2} =$

8) $\frac{5}{6} + \frac{4}{6} =$

9) $\frac{5}{6} - \frac{2}{6} =$

10) $\frac{13}{4} + 2\frac{1}{4} =$

11) $2\frac{2}{3} - \frac{4}{3} =$

12) $2\frac{1}{2} + 1\frac{1}{2} =$

Answers

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____

8. _____

9. _____

10. _____

11. _____

12. _____

Solve each problem. Write your answer as an improper fraction. Write the answer as a mixed number fraction (if possible).

1) $\frac{14}{6} - \frac{9}{6} = \frac{5}{6}$

2) $2\frac{3}{4} + \frac{10}{4} = \frac{21}{4}$

3) $\frac{1}{6} - \frac{5}{6} = \frac{-4}{6}$

4) $2\frac{5}{6} + \frac{11}{6} = \frac{28}{6}$

5) $\frac{21}{12} - 1\frac{5}{12} = \frac{4}{12}$

6) $\frac{12}{5} + 2\frac{1}{5} = \frac{23}{5}$

7) $3\frac{1}{2} - 1\frac{1}{2} = \frac{4}{2}$

8) $\frac{5}{6} + \frac{4}{6} = \frac{9}{6}$

9) $\frac{5}{6} - \frac{2}{6} = \frac{3}{6}$

10) $\frac{13}{4} + 2\frac{1}{4} = \frac{22}{4}$

11) $2\frac{2}{3} - \frac{4}{3} = \frac{4}{3}$

12) $2\frac{1}{2} + 1\frac{1}{2} = \frac{8}{2}$

Answers

1. $\frac{5}{6}$

2. $5\frac{1}{4}$

3. $-1\frac{2}{6}$

4. $\frac{4^4}{6}$

5. $\frac{4}{12}$

6. $\frac{4^3}{5}$

7. $2\frac{0}{2}$

8. $1\frac{3}{6}$

9. $\frac{3}{6}$

10. $5\frac{2}{4}$

11. $1\frac{1}{3}$

12. $4\frac{0}{2}$
